

I am writing in opposition to H 5862, though I am fully in agreement with the spirit and goals of the bill.

Instead of holding the health insurance companies responsible to prove that a treatment or service is not needed, I would prefer that the bill be worded so that the health insurance companies would assume full medical/legal liability for the results of delay in or denial of care their review process causes.

Let me say this again. Instead of holding the health insurance companies responsible to prove that a treatment or service is not needed, I would prefer that the bill be worded so that the health insurance companies would assume full medical/legal liability for the results of delay in or denial of care their review process causes.

Thank you.
